So given Rosella's response, I would say in the CSTAG memo:

Under the TMDL program, EPA is working with the States of NY and NJ on implementation of nutrient and toxic contaminant controls in NY/NJ Harbor Estuary waters, which include the Lower Passaic River. Any actions implemented under the TMDL program to address contamination coming from the NJ/NY Harbor Estuary would accelerate the time frame within which Lower Passaic River remedies achieve their goals.

Here is response – I'll give you a call to see if this provides enough to work off of.

Hi Alice!

There are no TMDLs for the lower Passaic (below Dundee Dam). We are still working with NY and NJ on implementing some nutrient and toxic controls in the Harbor waters, which would include the lower Passaic. The upper Passaic has a phosphorus TMDL and possibly a pathogen TMDL (I would need to confirm this).

Let me know if you need more specific info.

Rosella

Hi Rosella! I'm wondering if I might ask you a favor...

Would you remind me what TMDLs are in place or being developed that involve the Passaic River?
